

TEXTILE SHIELD

A water-based, non-toxic coating designed to repel water and oil from a wide variety of natural and synthetic fabrics.

Surface Preparation	Textile must be completely free of all contaminants including detergents and fabric softeners. To rid of contaminants, wash using hot water on a spin cycle. Fabric must be COMPLETELY dry before application.
Application	Completely saturate fabric by spray or dip application.
Dry Time	Less than 24 hours. Drying can be accelerated with heat up to 150°C.
Cure Time	About 24 hours. Cure can be accelerated with heat up to 150°C.
Storage	2 year unopened shelf life stored at 38°F to 86°F (3°C to 30°C) out of sunlight in a dry, well-ventilated area.
Coverage	25-300 ml/10ft ² (1m ²) – highly dependent on porosity of the substrate.
Extended Care & Maintenance	Tested up to 30 washes in ideal laboratory conditions. Recommended care is washing in hot water with no detergents or fabric softeners to keep the hydrophobic effect. If a detergent has been used, it is important to rinse fabric with hot water to restore performance of coating.
Disposal	Follow local/federal/national regulations. Consult disposal experts and your regulatory agency for any questions.
First Aid	Eye Contact: Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. If symptoms persist, seek medical attention. Skin Contact: Immediately rinse with water. Inhalation: If inhaled, remove to fresh air. Get medical attention if symptoms persist. Ingestion: Rinse mouth out, follow with drinking plenty of water. Do NOT induce vomiting; call for medical help immediately. If victim is vomiting, bring head in low position (increased danger of aspiration/perforation). A person vomiting while lying on their back should be turned onto their side.

KEEP OUT OF REACH OF CHILDREN
