## Liquid Nanotint®

Solar Control Coating

## Boosting Efficiency

When you want to upgrade your home to improve energy efficiency, residential window tinting is an option worth exploring. Liquid NanoTint® is a solar control glass coating that allows you to increase energy efficiency and optimize savings by reducing the consumption of air conditioning in the summer and heating in the winter.

Unlike other in-home window tinting, such as window film, Liquid NanoTint® does not alter your view of the world around you, and yet it's far more effective. Your windows stay clear and bright while letting in maximum light but cutting down on temperature transference. The UV protection and IR protection are unmatched by any other product.

## Key Features & Benefits

**Increases Energy Efficiency**

**Boosts Thermal Comfort**

**Boost UV Protection**

**Maximize Visible Light**

## Why choose Liquid NanoTint®?

Our highly-transparent solar control coating :

- Transforms your existing single and double pane windows into energy efficient ones
- Allow for maximum natural light to enter
- Has a payback period within 3-5 years
- Easy application
- Does not crack, bubble or peel
- 15 year limited warranty

Testing shows an average room temperature reduction of 3-5°F.

**99%** of UVA/UVB Rays Blocked

**80%** of Infrared Rays Blocked

**75%** Visible Light Transmittance
